

BARRIER POST WITH BELT TORDA

The barrier stanchion Torda is an effective solution for separating different zones and to guide streams of visitors. The stable cast steel base features a cover plate and the pole is made of aluminium. The self-retracting 2.3 m long black belt is equipped with an integrated arrester to ensure the belt retracts slowly. The barrier stanchion can support up to three belts. Torda is available in two versions: black powder-coated or in a stainless steel design.
